Medialon Manager 7

With Medialon Manager V7.1 you can control any audiovisual, lighting, special effect, and computer equipment using any protocol and network. Being software based, it integrates naturally with IT infrastructure such as virtualization environments, for a wide range of applications. Control of audio and video streaming, links to database, media management, and facility-wide control are all made easy by Medialon Manager.

Previously, Medialon Showmaster Editor software was used to program shows to run on Showmaster LE and Showmaster Pro hardware. An entirely new product architecture now supports Medialon Manager V7.1 running natively on the Showmaster hardware, simplifying programming, testing, and deployment.¹

Faster programming

Thanks to its easy graphical programming environment, you can program applications far faster than with any other conventional control system. There is no need to learn how to code or compile. Its native synchronization capabilities and Timeline with drag-and-drop programming make it the ideal choice for show control applications. If you need it, complex logical task programming is also available. Medialon Manager is hardware independent and relies on standard hardware from IT or audiovisual industries to connect to devices.

Medialon Manager V7 New Features

Autosave

Medialon Manager V7 introduces a new 'autosave' feature, which stores a recoverable version of your project file every 5 minutes (a modifiable time interval). If you experience a crash or power failure while programming, any lost work is limited only to the time between the last autosave and when Manager stopped running.

¹ Please note that while Medialon Manager V7.1 is compatible with Showmaster Pro and Showmaster LE hardware, only more recent models have the required motherboard in them. The upgrade is a paid upgrade that requires additional hardware to be installed. Eligible Showmasters can be sent to 7thSense to be upgraded, but the upgrade is not something that can be performed by end users or systems integrators. Please contact our sales team at info@7thsense.one for more information, and to enquire about compatibility of your Showmaster hardware with Medialon Manager 7.1.

Preferences			
- <mark>General</mark> - Project - Task	Maximum instance(s) of Manager: 1	Max Allowed is 2	
– Run Time – Network	Theme selector : Amber	Theme selection disabled in V	
– UserScreen – Watchdog	Don't show tip of the day dialog at startup		
Log Traces	Allow changing value of System variables		
	Enable recovery file	Interval : 5	min.
	Enable V6 Day Of Week compatibility		
		Ok	Cancel

The next time you load a project with autosave data associated with it, Manager V7 asks if you want to load the autosaved data.

Project Recovery	
A recovery file is present	in this project's directory; This could mean Manager stopped anormaly before the latest changes were saved. would you like to recover this project? doing so will replace the current project file. Choosing no will delete the recovery file and you will not be able to recover it later.
	<u>Ok</u> No Cancel

Auto Start Task Property

In every Medialon project, there are Tasks you want to run as soon as the project starts. Sometimes it's housekeeping stuff to make sure variables are populated, sometimes it's starting a watchdog task or a schedule processor. Manager V7 makes it a snap to flag Tasks to be executed when the project starts, by adding a new Property to Tasks for Auto Start.

Properties		
Object Type	Task	?, 🕽
Name	Task_10	?, 🕽
Description		? 🕽
User Mode Rights	None	- ?)
Color Tag	000,000,000	<i>7</i> . •
Tags		<i>7</i> . •
Comment		? 🕽
Condition		<i>7</i> . •
Auto Start	Active / Enabled	3. 1
Log Trace	Active / Enabled	?. 1

The Task Lister shows an icon indicating Auto Start in the Start Condition column.

Direct linking of Variables and Expressions in Properties of UserScreen objects

Medialon projects can get really complex, with hundreds of tasks just to handle display objects on user interfaces. Manager V7 introduces a new 'direct linking' feature, which eliminates the need to have a Task for each and every Text Display, Gauge, and LED on your user interfaces.

UserScreen object Properties, which are modifiable when the project is running by using the Object Control command, are now directly modifiable by linking a variable or writing an Expression to calculate the value. This offers a much cleaner Task list and smaller project files!

Properties		=	
Туре	Display	? 🕨	
Name	TextDisplay_9	?. ▶	
Page		? 🕨	
Left	750	? 🕨	
Тор	130	? 🕨	
Width	210	? 🕨	Tasks (6)
Height	50	? 🕨	Timeline Scene 1 Timeline Scer
Text		?. 🏲	Select a variable
Text Font	A Tahoma, 8	17 🔽	Edit expression
Text VPos	Center	- ?. ▶	Edit expression

Expressions in Cue Parameters

You will often need to calculate a value to use as a cue property. You would employ a User Variable to hold the result of an Expression just prior to executing the cue using that User Variable. With Manager V7, properties of cues can use static values, variables, and now Expressions, right in the cue property. This eliminates the need for lots of single-use User Variables, and shortens your Tasks by moving the calculations into the cues to which they are related.

🍸 Ini file name 🛛 🗋 "" + Manager.CurrentProjectFile - 7 + "UserData\"+Manager.CurrentDay+".ini" 🛛 🧱 🗡 🕨

Assign Colours / Tags to Devices, Tasks, Variables, and filter using Smart Groups

Scrolling through lists of Tasks and Variables can be tiresome, so we added some new ways to organise your project files so important things stand out or are easier to find.

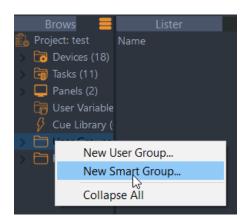

A new Color Tag property on all objects in the system adds a colour 'chip' in the Lister instance of that object, making it easier to spot when scrolling through a list.

Properties		=
Object Type	Task	?, 🕨
Name	Timeline_Scene_1_Status_Fill_TextDisplay	? 🕨
Description		?. 🕨
User Mode Rights	None	- ? Þ
Color Tag	035,105,245	12 🕨
Tags	Scene1	<i>i</i> /
Comment		?. 🕨
Condition D	Timeline_Scene_1.Status#	<i>7</i> : ►
Auto Start	Active / Enabled	?. 🕨
Log Trace	Active / Enabled	?, ▶

	Lister	E
Status	Name 🔻	Start condition
<u>(;)</u>	Task_10	•••
\odot	Task_11	***
\odot	Timeline_S	🖗 bt_Play_Scene_1.Status==1 & bt_Play_Scene_1.Status#
	Timeline_S	5 🖗 Timeline_Scene_1.Status#
		🖗 Timeline_Scene_1.Timecode#
\odot		5 🖗 bt_Play_Scene_1.Status==1 & bt_Play_Scene_1.Status#
	Timeline_S	🖗 Timeline_Scene_1.Status#
	Timeline_S	5 🖗 Timeline_Scene_1.Timecode#
\odot	Timeline_S	🖇 bt_Play_Scene_1.Status==1 & bt_Play_Scene_1.Status#
	Timeline_S	🗄 🖗 Timeline_Scene_1.Status#
	Timeline_S	🖗 Timeline_Scene_1.Timecode#

It's often helpful to be able to find Devices, Tasks, and Variables based on their use, for example 'Preshow Tasks' or 'All Projectors' or 'Timecode Variables.' We have expanded the idea of User Groups to a new type called **Smart Groups**.

Smart Groups use search terms to automatically populate groups of Devices, Tasks, and Variables. You can search by Color Tag or Tags, a new property for 'tagging' objects with arbitrary text.

Properties		=
Object Type	Smart Group	?
Name	SmartGroup_Scene1	?
Description		? 🕨
Color Tag	000,000,000	1.
Tags	Scene1	11
Strict Match	Active / Enabled	?. >
Allow Drag/Drop Add	🗹 Active / Enabled	?

iFrames in WebPanels

Have you ever wanted to embed a device's web interface directly into a WebPanel? Manager V7 makes it easy by using the Container UserScreen object in the context of WebPanels. Assign a URL to the Container object's URL property, and the web browser renders the page from that URL within the pixel space the Container occupies on the WebPanel. You can embed video feeds from cameras or media servers, full websites, or web apps.

The Container in the Panel Editor in Manager remains black; the target URL is only rendered by the web browser displaying the WebPanel.

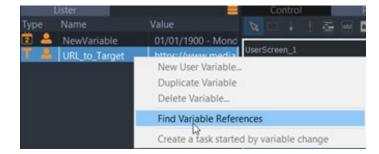

Changing the URL property (either by using the Manager command Object Control to Set the URL property, or by directly targeting a String variable in the Container object's URL field and changing the String variable's value with an expression) causes the container to refresh to load the new URL.

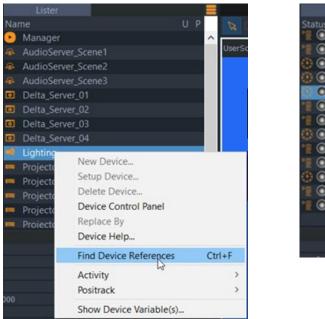

Please note, not all websites allow themselves to be displayed within iframes (notably Google), so your results may vary.

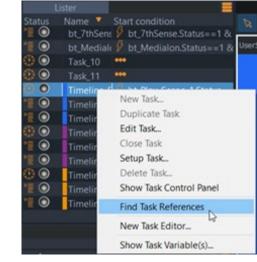

'Find this object reference'

A new contextual menu item saves time when searching for references to objects in the project.

'Close all but this' in Task Editor

When you're editing a project file, you will sometimes find you have dozens of Task Editor tabs open. In Manager V7, you can right click to close all the tasks except the one you've selected.

Tasks (5)			
bt MedialonC	lick bt 7thSenseClick Task 10 Tas	14 Timeline Cours O Timeseeds Fill Tour	Display
00:00:00/0		New Task Ctrl+T	_
00.00.00/0		Duplicate Task	
		Setup Task	
Tracks		Close Task	
Track1		Close All But This	
		Show Task Variables	

Align UserScreen objects to page extents

In addition to being able to align UserScreen objects among the selected objects, Manager V7 introduces the 'Align to page' option to align objects to the page's extents (left/center/right/regular spacing, top/center/bottom/regular spacing).

Align	×
Horizontal None Left Center Right Regular Spacing	Vertical None Top Center Bottom Regular Spacing
Align to page	Ok Cancel

Contextual menu item to Lock/Unlock, Group/Ungroup, and Move UserScreen objects

Some useful UserScreen editing tools have gone unnoticed, hidden in the menus, so in Manager V7, these tools are exposed via the right-click contextual menu, making it faster to group, lock, or move UserScreen objects to other UserScreens or pages without breaking their associated programming.

Create a task started by this object Add 'Start Condition' to selected task	
Create a task to monitor a variable in this obje	ect
Create a task to perform a device command f	rom this object
Show Object Variable(s)	
Group	Ctrl+
UnGroup	Ctrl+
Lock	Ctrl+
Unlock	Shift+Ctrl+

Additional timecode frame rates

In addition to the 24, 25, 30, 30 drop frame, 100, and 1000 frames per second frame rates, Manager 7.1 supports 23.976, 50, 59.94, 60, 120 and 240 timecode frame rates. The MxMs for devices that support the higher frame rates will be updated (affecting timecode, locate commands, and Positrack).

OpenCapXML plugin for Unity

For interactive games or generative media applications, Unity[®] programmers can access Tasks and Variables in Medialon show control systems using the OpenCapXML plugin for Unity.

This plugin makes it easy for Unity programmers to link to Medialon Manager and Showmaster projects to trigger tasks, update variable values in the Medialon project, and subscribe to variable value updates from the Medialon project.

With the OpenCapXML plugin for Unity, Medialon control systems become a bridge between the virtual (Unity) world and the physical world where devices (such as lighting equipment, audio playback, fans, smell generators, heat lamps, water misters, vibration transducers, and video projection/displays) can all work together to tell an interactive story using a built environment, and can even be pre-programmed and debugged before sending to site by mocking it up in the virtual environment.

For more information or to request access to the OpenCapXML plugin for Unity, contact us.
