

Medialon Manager V7

software that turns any PC into a show controller

medialon

BY 7THSENSE

- Remarkably easy to program
- Excellent reliability
- Control any audiovisual equipment using any protocol

Programming interface, GUI builder, and show execution engine – all in one piece of software!

Medialon Manager V7 is software that turns any Windows® PC into a show controller. Reliable and easy to use, Medialon Manager is widely used in simple and critical control applications such as: museum media control, theme parks and attractions, live events, architectural video and lighting control, convention center audio and video remote control, etc.

With Medialon Manager you can control audiovisual equipment using any protocol and network. Being software based, it integrates easily with IT for a wide range of applications. Control of audio and video streaming, linking to external data sources such as databases, media management, and facility-wide show control systems are fast to deploy with Medialon Manager.

Faster programming

Thanks to its easy graphical programming environment, you can program applications far faster than with any other conventional control system. There's no need to learn how to code or compile; Medialon Manager uses a real-time execution engine. Its native synchronization capabilities and easy to use Timeline with drag-and-drop-programming make it an excellent choice for show control applications. And when you need it, creating complex logical tasks and automation is just as easy using the same drag and drop tools.

Medialon Manager is hardware independent and relies on standard hardware from IT or audiovisual industries to connect to devices.

Device drivers

The Medialon website includes a section to download device drivers for Medialon Manager and Showmaster, including MxMs, MRCs, Low Level Communicator Drivers, and Medialon Script drivers.

Register your software

Registering your Medialon show control software on the Medialon website allows you to subscribe to updates about new software and device driver releases.

Product Specifications

Medialon Manager V7

Sync	Task programming through Timeline Tasks.
Accuracy	One hundredth of a second time-based task synchronization accuracy with position tracking of controlled devices.
Timecode	Timeline tasks use a native synchronization rate of 100 frames per second, but this can be changed to 24, 25, 30, or 30 (drop frame) frame rates. Timelines can synchronize to time from any time variable in the system, including SMPTE Timecode, MIDI Timecode, time of day, or timecode returned from connected devices.
Cue Recording	Incoming DMX, Serial, MIDI, and network data streams can be recorded in real time and played back in Timeline tasks. This is particularly useful for lighting chases, animatronic figure motion profiles, or anything where the source data comes from analog devices like sliders.
User Interfaces	Custom user interfaces are designed in Showmaster Editor and published by the Showmaster hardware as web pages called WebPanels, accessible from any network connected device with a web browser. WebPanel user interfaces can include buttons, sliders, text displays, LED indicators, editable text fields, gauges, pictures, and static text.

Medialon Manager V7 new features

- Autosave
- Auto Start task property
- Direct linking of variables and expressions in properties of UserScreen objects
- Expressions in cue parameters
- Assign colors / tags to devices, tasks, variables, and filter using smart groups
- iFrames in WebPanels
- 'Find this object reference'
- 'Close all but this' in Task Editor
- Align UserScreen objects to page extents
- Contextual menu item to lock/unlock, group/ungroup, and move UserScreen objects
